

Actuator Driven Compact Valves

- **KELMO® Electric Actuators:** EA, EAE, ED, ESA, RD and LDP Series
- **Pneumatic Actuators:** C, CS, FBS Series
- **1/4" to 2" Class 5K/10K/20K Bronze and Stainless Steel Threaded Valves**

KITZ 3-way compact ball valves: Flow directional form		05
Seat P-T ratings		06
<KITZ KELMO compact electric actuator series:>		
EA/EAH series	Actuator which was designed exclusively for small size ball valves Many products are prepared and are available for various fluids.	10
EAE series	Spring return type. Two wiring system. Operation time is not so fast unlike solenoid valves so that water hammer is hard to occur. Easy manual operation. Manual lock mechanism.	28
ED series	Actuator for DC12/24V. Available for battery power supply and sequence of measuring equipment. ED12/24-2 is available for vehicle.	30
ES series	Design for build-in apparatus is characteristic. Installing and removing without tools. Light and compact design.	32
RD series	Rotary control type. Suitable for proportional control with high accuracy.	34
LD series	Linear control type. Coolant flow control use of semiconductor production device.	36
<KITZ compact pneumatic actuator series:>		
C · CS/FBS series	Actuator which was designed exclusively for small size ball valves Die-cast aluminum body and double piston mechanism make actuator lightweight and compact. Direct mount type special solenoid valve exclusively use.	39

PRODUCT Coding

Product coding for actuator (On-off control)

EA LB 100 — 1

1 2 3 4

- ① Actuator type
 - EA AC actuator (90° shaft rotation)
 - EAH AC actuator (180° shaft rotation)
 - ED DC actuator (90° shaft rotation)
 - ESA Toolless designed AC actuator (90° shaft rotation)
 - EAE Spring retrn type AC actuator (90° shaft rotation)
- ② Wiring
 - None with cables
 - L with build-in relay for EA series only
 - B with terminal box for EA/EAH/ED/EAE seeries only
 - LB L + B for EA series only
- ③ Power supply
 - 100 AC 100
 - 200 AC 200
 - 12 DC12V
 - 24 DC24V
- ④ Type
 - 1 except EDH series
 - 1.5 for EA/EAH series only
 - 2 except EKSr/ESA/EAE series

Product coding for actuator (Proportional control)

R D P2 24 —

1 2 3 4

- ① Actuator movement
 - R Rotay
 - L Liniar
- ② D DC power supply
- ③ Operation panel
 - P2 without
 - H1 with external output terminal box for RD series only
- ④ DC power supply
 - 24 DC24V

Product coding for actuator (Pneumatic)

CS — 1

1 2

- ① Action
 - C Double action
 - CS Spring return
 - FBS Spring return
- ② Type
 - 1
 - 2 except FBS

Product coding for valve

U T KLH E *

1 2 3 4 5

- ① Body material
 - None Bronze/Brass
 - U Stainless steel
 - 5/10U Stainless steel, wafer type
- ② Valve type
 - T Screwed Ball valve
 - NL Screwed Needle valve
- ③ Design
 - None Standard or Reduced bore
 - F Full bore
 - L Long neck
 - N Horizontal 3-way ball
 - NV/V Vertical 3-way ball
 - G Gland packing design
 - U Male & Female with an Union ring
 - LU L + U
 - AS Uni-body, M5 tapped for panel mounting
 - KS Uni-body, M5 tapped for panel mounting
 - KL Uni-body, Long neck
 - KLAH Uni-body, Long neck, steam service(180°)
 - KLv Uni-body, Long neck, Vertical 3-way ball
 - Q V cut ball
 - LQ L + Q
 - KLQS Uni-body, Long neck, V cut ball
 - W Wafer type, Full bore
- ④ E Valve for actuator exclusive use
- ⑤ M 316SS for U of ②
 - K MLIT building construction standard specifications in Japan
 - X with PPS bracket that is available for low temp (-15°C~+100°C) & lagging
 - <JPF01> Hypatite PTFE seat & PTFE packing for UTGE
 - <JM201> Hot water rinsing & grease is adapted to food use for UTEX

KITZ 5K/10K/20K Compact Valves

Valve design features

- Convenient size range from 1/4" through 2".
- Integral actuator mounting pads enabling easy mounting or dismantling of actuators for speedy maintenance.
- Tight contact between PTFE ball seats and high precision machined balls for leakage-free service.
- Stems, made of high strength brass, are used for longer service life.
- Choice of materials: Stainless steel for corrosion resistant service, or brass and bronze for general W.O.G. service.

Valve design specifications

Threaded ends:	JIS B 0203
Union ends:	JIS B 2301
Maximum service pressure:	1.0 MPa
	TKE and TKSE for 3/4" and larger, 5UTWE: 0.5 MPa
	TLEK, UTKLEM & UTKLVEM: 2.0 MPa
Seat P-T rating:	See Page 6 & 7

Ball & Needle valve design and applications

Fig.	Class	Body	Bore	Neck	Application	Remarks
TE	10K	CAC406	SB	Short	On-off control of water, oil, and gas	
TFE			FB			
TLE			SB	Long	Insulation *	
TNE				Short	Instantaneous change (Horizontal 3-way)	
TUE					Female & male (uni-body with union nipple) threaded ends ***	
TLUE	10/5K	C3771	RB	Long	Insulation *, Female & male (uni-body with union nipple) threaded ends ***	
TKSE					Uni-body, M5 tapped for panel mounting	for EAE
TNVE			SB	Short	Instantaneous change (Vertical 3-way)	for EAH
TASE			RB		Uni-body, M5 tapped for panel mounting	for ESA
TQE					V cut ball, proportional control ****	For RD
TLQE			SB		Insulation *, V cut ball, proportional control ****	For RD
TKLASE				Long	Uni-body, Insulation *, steam service (150°C)	for EKSR
TKLQSE			RB		Uni-body, Insulation *, V cut ball, proportional control for steam	For RD
TKLVE					Uni-body, Insulation *, Instantaneous change (Vertical 3-way), proportional control ****	For RD
TLEK			SB		Insulation *, 2.0MPa service	
UTE	10K	CF8M	RB		Uni-body	RoHS
UTEX					Uni-body, with PPS bracket that is available for low temp (-15°C ~ +100°C) & lagging	
UTEX<JM201>			FB		Hot water rinsing & grease is adapted to food use for UTEX	
UTFE					On-off control of water, oil, and gas	RoHS
UTGE			RB	Short	Uni-body, Gland packing design (Retightening possible) **	RoHS
UTGE<JPF01>					Uni-body, Gland packing design (Retightening possible) **, Hypatipite PTFE seat	RoHS
UTNE					Uni-body, Instantaneous change (Horizontal 3-way)	RoHS
5UTWE			FB		Uni-body, Wafer type, Easy maintenance	RoHS
10UTWE						RoHS
UTVE					Uni-body, Instantaneous change (Vertical 3-way)	RoHS, for EAH
UTASE	10K	CF8			Uni-body, M5 tapped for panel mounting	RoHS, for ESA
UTQE					Uni-body, V cut ball, proportional control ****	RoHS, for RD
UTKLAASE					Uni-body, Insulation *, steam service (150°C), cavity pressure relief, uni-directional	for EKSR
UTKLAHE					Uni-body, Insulation *, steam service (180°C), cavity pressure relief, uni-directional	
UTKLE(N)				Long	Uni-body, Insulation *, 2.0MPa service, proportional control ****	For RD
UTKLEM(N)						For RD
UTKLVE					Uni-body, Insulation *, 2.0MPa service, Instantaneous change (Vertical 3-way), proportiona control ****	RoHS, for RD
UTKLVEM						RoHS, for RD
UNLE			—	Short	Needle valve, proportional control ****	For LD

* for thermal isolation

** High temperature service(150°C). Don't install where can't maintain

*** Easy installation

**** for water, oil and gas

Bore design (API 608): FB=Full bore, SB=Standard bore (Single reduced bore), RB=Reduced bore (Double reduced bore)

JIS B0203 of BC/BS ball valves: The length of useful threads & the positions of gauge planes are built on KITZ standard.

Applications

Automated on-off or 3-way flow control in HAVC service handling water, oil, gas and air (by brass and bronze valves) or in light load industrial processes for pharmaceutical, fine chemical, petro-chemical, food, beverage, textile and other general industries.

Precautions

- ① No application to fluids including powders, dirt or sands.
- ② Contact KITZ or its local distributors for technical advice on application to:
 - Fluid of high viscosity, steam or vacuum.
 - Velocity of 3 m/s or faster.
 - Service with concern of an extraordinary pressure rise of line fluid or a variation of fluid temperature higher than 60°C.
 - For voltages other than KITZ standard specification.
 - Use of equipment that put human lives at risk.

Valve flow coefficient (Cv for fully opened valves)

KITZ 3-way Compact Ball Valves: Change of Flow Directional Form

KITZ horizontal 3-way ball valves are principally used for quick change of flow direction. Also 3-way ball valves can be used for the simplification of piping systems as shown in Fig. 1.

KITZ Fig. TNE, TNVE, UTNE and UTVE 3-way ball valves are provided with L-port and double face seating design for change of flow direction between Form 1 and 2. It should be noted that, if the line pressure of the closed bore is higher than that of the open bores, a small rate of fluid leakage may occur from the closed bore. (Fig. 2)

KITZ 3-way Compact Ball Valves: Flow Directional Form before Shipment

Shipment shall be made with the flow directional form fixed as illustrated here. (Fig. 3)

Location of cord connectors (top view):

The location of the cord connector for an actuator is also arranged as below:

Horizontal 3-way: Size 1 & 1.5: Right hand side
Size 2: Diagonally forward right

Vertical 3-way: Size 1: Right hand side
Size 2: Diagonally forward left

for saturated steam

Valve: TE · TFE · TLE · TNE · TUE · TLUE · TNVE · TQE · TLQE · UTE · UTFE · UTNE · 5/10UTWE · UTVE · UTQE

- Fluid: water, oil, gas (unfrozen) or saturated steam
- Ball seat: reinforced PTFE (Option*)
- O-ring: FKM (Option*)

Valve: TKSE

- Fluid: water, oil or gas (unfrozen)
- Ball seat: PTFE
- O-ring: FKM

*Specify these materials in your order for the P-T ratings covered by the graph shown above, except for 1½" and 2". Standard materials are only available for these sizes.

Note: • Serviceable ambient temperature depends on the design of actuators. Refer to the information given for each of actuators introduced in this catalog.

• Do NOT install UTGE with gland packing into a position where maintenance is not possible.

seat pressure-temperature ratings

Valve: TKLQSE

- Fluid: saturated steam
- Ball seat: PEEK
- O-ring: FKM for steam service

Valve: UTKLAHE

- Fluid: saturated steam
- Ball seat: Hypatite PTFE
- O-ring: FKM for steam service

Valve: UNLE

- Fluid: water, oil, gas
- Ball seat: SUS316
- O-ring: FKMt•NBR

* Max.ΔP: 0.4MPa. ΔP ratio (=ΔP/P1): Less than 0.5

Valve: TKLQSE, TLEK, UTKLVE(M), UTKLE(M)

- Fluid: water, oil, gas
- Ball seat: Reinforced PTFE
- O-ring: FKM

* Max.ΔP: 1.0MPa

Valve: UTEX

- Fluid: water, oil, gas
- Ball seat: PTFE
- O-ring: FKM

KITZ KELMO® Electric Actuators

General design features

- Compact size and light weight with die-cast aluminum housing and powerful miniature motor for economy and handling ease.
- Simple mechanism with minimized number of component parts for high durability and trouble-free service.
- Free from concerns common with conventional solenoid valves such as water hammer, pressure loss, and restricted flow direction.
- All-weather-type design for outdoor service. (Avoid exposure to direct sunlight)
- Availability of manual operation in case of electric failure.
- Versatile applications by means of optional built-in relay circuit for parallel drive, terminal boxes and 180° rotary mechanism for 3-way flow direction.
- Safety provision to protect the motor from overheat damage caused by accidental overload.
- Factory-made actuator-to-valve assembly for off-the-shelf supply.

Compact KELMO® actuators: power sources and functional features

Type of actuator	* Power source	Functional features
EA Series	100/200 V AC (50/60 Hz)	90° bidirectional rotation
		90° bidirectional rotation/Terminal box
		90° bidirectional rotation/Built-in relay
		90° bidirectional rotation/Built-in relay/Terminal box
		180° bidirectional rotation
		180° bidirectional rotation/Terminal box
EAE Series	100/200 V AC (50/60 Hz)	90° bidirectional rotation/Spring-return
ED Series	12/24 V DC	90° bidirectional rotation/Parallel drive
ES Series	100/200 V AC (50/60 Hz)	90° bidirectional rotation

* Optional Specification (EA Series)

AC110 V (50/60 Hz)	AC220 V (50/60 Hz)
AC115 V* (50/60 Hz)	AC230 V* (50/60 Hz)
AC120 V (50/60 Hz)	AC240 V (50/60 Hz)

*Fluctuation +5%~−10%
Others: ±10%

Type EA and EAB Electric Actuators/Class 10K Bronze or Stainless Steel Ball Valves

100/200 V AC 50/60 Hz

■ **90° bidirectional rotation**

■ **Factory assembled terminal box for easier installation of actuators (EAB)**

Note: Contact KITZ for technical advice when the service conditions differ from the above.

Type EA actuator circuit diagrams (with the valve fully closed)

EA100/200 Size 1 to 2

● Wire color: **R** red **W** white **B** black **Y** yellow **G** green

● Actuator rotates:

R-W: counter-clockwise to fully open the valve

R-B: clockwise to fully close the valve

● Limit switches activate:

OLS: on fully opening the valve (R-W: off W-Y: on)

SLS: on fully closing the valve (R-B: off B-G: on)

Note: For all sizes of Type EAB100/200, the terminals are numbered 1, 2, 3, 4 and 5 in place of R, W, B, Y and G, respectively.

Note: ● When two or more actuators are operated by a single switch, ensure to prevent unintended current flow by using relay contacts.

● Auxiliary devices, such as lamps or relays, where minute current is used, may cause failure in the contacts of limit switches. Consult KITZ for such applications.

KELMO® EAE Series Spring Electric Actuator

100/200V AC 50/60Hz

- **Two-wire power supply system for easy replacement of conventional solenoid valves as a valve actuating device.**
- **Modest operating speed with no concern of water hammer, which is a problem for conventional solenoid valves.**
- **Availability of manual operation.**
- **Auto-lock provision to hold valve opening position when the actuator is turned off.**

Type EAE actuator design specifications

Specification	Type	EAE100-1	EAE200-1
Power source 50/60Hz		100V AC	200V AC

Mounting position		Vertical to horizontal	
Wiring		0.3mm ² lead wire	
Lubrication		Grease	
Coating color		Housing: black Cover: light blue	

*The use in outdoor, such as the place where the actuator may get splashed or the place of high humidity, is prohibited.
Terminal boxes and cabtyre cables are available as an option.

Actuator circuit diagrams

Operating mechanism

- The basic mechanical structure is given in the illustration below.
- Energizing an actuator rotates a motor and transfer the torque to a one-way clutch via reducing gears. The torque will be, then, transferred to the shaft and will open the valve, while winding up the core spring simultaneously.
- 90° rotation of the shaft activates an automatic lever to contact a stopper and stay in thus fixed position, while the actuator remains energized.
- De-energizing an actuator activates the ball to rotate clockwise to its closed position, by means of repulsing force of the coil spring.

Note: • Terminal box and cable cables are available for option.

• EAE actuators are on-off actuators. Do NOT use them for partially opening or closing valves.

⚠ Cautions for use of EAE actuators

- These actuators have no provision of explosion-proof and should not be used in an explosive atmosphere. They have no provision of airtight enclosure and are not recommended for use in corrosive gaseous or excessively humid atmosphere, or where the actuators may get splashed.
- These actuators are designed only for on-off fluid control by means of full opening or closing of valves. Do NOT use them for partial opening or closing for intermediate valve positioning.
- Excessively high frequency of operation such as 20 cycles per hour may shorten service life of actuators. Application to air-conditioning or ventilation service may cause this problem.
- Do NOT use them for handling highly viscous fluids containing particles, dirt or sands.
- Actuator housings are made of PBT resin. To avoid damage, do NOT place any other heavy objects on actuators, or do NOT step on actuators.

Type ED Electric Actuators/Class 10K Bronze or Stainless Steel Ball Valves

12/24V DC

■ **DC 12V or 24V for handy, on-the-spot automated valve operation**

Type ES Electric Actuators/Class 10K Brass or Stainless Steel Ball Valves

100/200V AC 50/60Hz

- **Shock-resistant and tough polycarbonate (PC) is adopted to the actuator cover and the gear case to improve durability.**
- **Dust-prevention and drip-proof construction compliant with IP65 ensure the installation in a severe environment.**
- **Easy separation of valve-actuator assemblies for replacement by hand even in a confined space.**
- **Semi-translucent actuator cover allows easy viewing of the valve position indicator.**
- **Downsizing of the product has been achieved by modifications to the layout of the actuator internal parts and the valve connecting structure.**
- **This product can be installed to the arbitrary location of the intended device using the tapped holes for fixing at the bottom of the valve. Efficiency of piping work is significantly improved, and connection to nylon tubing is easily done.**

Type ES actuator design specifications

Specification	Type	ESA100-1	ESA200-1
Operation		ON-OFF (Fully open ⇔ Fully closed)	
Power source (single phase) 50/60Hz		100 V AC ± 10%	200 V AC ± 10%
Rated current		90 mA	50 mA
Valve open/closing time		Approx. 9 s (50 Hz)	Approx. 7.5 s (60 Hz)
Rated time		30%ED (Maximum continuous operation time: 10 min)	
External output		One each for opening/closing	
Insulation class		Class E	
Insulation strength		1 min./1500 V AC or 1 s/1800 V AC	
Insulation resistance		10 MΩ or more (500 V DC)	
Service environment		Indoor use only (No direct exposure to the sunlight) −20°C to +50°C (No freezing)	
Mounting orientation		Vertical to horizontal	
Overload protection		Impedance protection	
Cable specification	Connection	Cable connection	
	Cable	0.5SQ, six cores, Length: 500mm	
Body material		PC, PPS	
Protection rate		Equivalent to IP65 of IEC60529	
Dismounting of actuator		Removal of two fixing pins	
Manual operation		Removal of actuator	
Compliance with RoHS		ESA□00-UTASE (SCS13A valves): Standard	

Type ES actuator circuit diagrams

(with the valve fully closed)

- * Wire color: R red, W white, B black, Y yellow, G green, Br brown
- * Valve in the fully closed position is shown in the circuit diagram above.
- * In the case where yellow cable or green cable is not loaded for connection, do NOT connect them. Please insulate them individually.
- * Ground the product to prevent an electric shock.

Type RD actuator design specification

Specification	Type	Low cost & High durability type	External output type
		RDP224	RDH124
Power supply		DC24 ± 10%	
Rated current		300mA	Operation:1A Stopping:0.1A
Valve closing time (s)		Approx. 15	Selectable between 3 to 20 seconds (Default: 3 seconds) Inching motion for 4 seconds or above
Rated output torque (N · m)		—	8
Max. output torque (N · m)		10	10
Power consumption		8VA	24W
Rated time (Duty factor)		Continuous	
Insulation class		JIS C4003 Class E (120°C)	
Protection rates		Equivalent to IP54	Equivalent to IP55
Service environment		- 10 to + 50°C RH30 to 85% (Indoor use only with no direct sunlight)	
Control input signal (Input impedance)		4 to 20mADC (Impedance 250 Ω)	4 to 20mADC (Impedance 250 Ω) <Option: 1 to 5VDC (Impedance 10k Ω) / 2 to 10VDC (Impedance 10k Ω) >
Position indicator output signal		—	4 to 20mADC (Load resistance Max. 500 Ω) <Option: 1 to 5VDC (Load resistance Min. 100k Ω) >
Error output		—	Open corrector output 30VDC 100mA or below
Dead band		1%	—
Resolution		1/200 minimum	Selectable between 1/10 to 1/200 (Default: 1/200)
Insulation strength		1 second for 600VAC	1 minutes for 250VAC or 1 second for 300VAC Leakage current: 1mA or below
Insulation resistance		500VDC 10M Ω or above	
Mounting position		Vertical to horizontal (No downward)	
Wiring		VCTF 0.3sq x 4c / 1m	Terminal connection 8pins with spring expression connector
Manual operation		Manual operation shaft located on bottom of actuator	Manual operation that turned on power supply is button switch
Position indicator		Indicator plate	LED (4 digits)
Reset operation		Power supply	Switches on operation panel (OPEN, SHUT or AUTO/MANUAL) or power off
Malfunction detection		—	Restriction error, Hunting error
Action		Reverse action	Selectable between direct action and reverse action (Default: Reverse action)
Operation at input signal interruption		Fully closed	Selectable from Fully closed/Fully open/Stop (Default: Fully closed)
Operation after power recovery		Control starts after fully closed	Control starts from where the power was cut off.
Lubricant		Grease	
Overload protection		—	Build-in current limiter circuit
Painting color		Black housing with light blue cover

Precautions for Trouble-free Operation of Electric Actuator Driven Ball Valves

Storage and Handling

Electrically operated KITZ compact ball valves are individually packed in styrofoam boxes. Do NOT unpack until you are ready to mount on the pipeline; store in dry, corrosion-free environment to keep rust-free, although they are adequately coated for primary protection. Handle units carefully when actuators are equipped with solenoid valves and other accessories. Do NOT place any other objects on actuators, and do NOT step on actuators. Overloading actuators must always be prevented.

Mounting and Piping

Before mounting electrically operated KITZ compact ball valves, make visual inspection of all valves, actuators and accessories to assure trouble-free condition. Tighten any loosened bolts securely. Clean valve and pipe bores to remove welding spatters, scales or any other foreign objects that may have been left inside. After mounting has been completed, blow the inside of all connected pipes and valves prior to the pilot operation of the system.

Do NOT use them in explosive or corrosive gaseous conditions, to avoid explosions, or damage to terminal contacts.

If there are materials containing silicon in the surrounding environment, a contact failure may occur due to the generation of siloxane gas. Do NOT use the product in a siloxane gas atmosphere.

Wiring and Operation

Color-coded wires should be connected to each correct terminal according to the actuator circuit diagram shown on each page of this catalog. Incorrect wiring may damage electrical components and accessories.

The following actuator is not provided with built-in relays. For parallel operation with other actuators, be sure to deploy a separate relay for each valve to drive.

EA	EAL	EAH	EAE	ED	ES
EAB	EALB	EAHB			

When valve opening or closing indicator lamp is not required, cut the exposed part of the wire end and isolate it from the electric current. Before manual operation, be sure to turn off the switch.

Do NOT use silicon-containing materials (electric wire, filler, adhesive) when wiring. It may result in a contact failure due to the generation of siloxane gas.

Maintenance

Disassembly of actuators is not recommended. Electrically operated KITZ compact ball valves can be mounted vertically, horizontally or with any intermediate angle as illustrated here. However, do NOT mount any lower than the horizontal level, as intrusion of rainwater may affect the quality of electric components and accessories.

Design Features of KITZ C·CS/FBS Series Actuators

- **Lightweight and compact size**
Die-casted aluminum body and double piston mechanism make the actuator lightweight and compact.
- **Simple mechanism and less malfunction**
This actuator consists of minimum number of parts. That makes the actuator longer service life and less possibility of malfunction.
- **Special solenoid valve**
Direct mount type special solenoid valve exclusively used for KITZ C-type actuator is available.
- **Highly efficient quarter turn actuator**
Double piston type rack and pinion mechanism provides highly efficient quarter turn rotation.
- **Direct mount type**
The actuator is directly mounted on a valve with only two bolts.

FBS-type actuator should be chosen for bigger size valves.

Precautions for Trouble-free Operation of Pneumatic Actuator Driven Ball Valves

Storage and Handling

Pneumatically operated KITZ compact ball valves are individually packed in Styrofoam boxes. Do NOT unpack until you are ready to mount on the pipeline. Store in dry, corrosion-free environment to keep rust-free, although they are adequately coated for primary protection. Handle units carefully when actuators are equipped with solenoid valves and other accessories. Do NOT place any other objects on actuators, and do NOT step on actuators. Overloading actuators must always be prevented.

Mounting and Piping

Before mounting pneumatically operated KITZ compact ball valves, make visual inspection of all valves, actuators and accessories to assure trouble-free condition. Tighten any loosened bolts securely. Clean valve and pipe bores to remove welding spatters, scales or any other foreign objects which may have been left inside. After mounting has been completed, air blow the inside of all connected pipes and valves prior to the pilot operation of the system.

Do NOT use where corrosive gas, chemical liquids, sea water cause contamination. Exposed rotating parts, such as the actuator shaft, must be protected from water or rainfall. They are not designed whether-proof.

Threading pipes or nipples on actuators must be maximized to five rotations, so that over-tightening threads may not develop cracks in die-cast aluminum housing, and cause air leakage and operational difficulty to actuators (Recommended tightening torque : 10 N-m for Rc 1/8" 15 N-m Rc 1/4"). Type CS spring return actuators should be mounted so that the exhaust hole on the cylinder, faces downwards at times (See the below) or, when unavoidable, the hole must be protected by adequate water-prevention measures.

KITZ compact ball valves can be mounted on KITZ Type C or CS actuators either horizontally, vertically or at any angle depending on your piping or operational convenience. However, filter-regulators must be mounted always horizontally, using amounting bracket.

Operation

Pneumatically operated KITZ compact ball valves are designed to be driven by air pressure ranging from 0.4 MPa to 0.7 MPa (60 to 100 psi). Smaller or larger air pressure will result in malfunction. We recommend to employ 0.4 MPa (60 psi), our standard operating pressure.

Be sure to dry and filter the air supply for trouble-free operation. This is particularly important in cold and humid climates.

Maintenance

Pneumatically operated KITZ compact ball valves are lubrication-free. When a leakage is detected on the actuator after a few years of operation, we recommended the actuator be disassembled to detect wear or deformation of sealers such as O-rings and gaskets for possible replacement.

MEMO

MEMO

CAUTION

Pressure-temperature ratings and other performance data published in this catalog have been developed from our design calculation, in-house testing, field reports provided by our customers and/or published official standards or specifications. They are good only to cover typical applications as a general guideline to users of KITZ products introduced in this catalog.

For any specific application, users are kindly requested to contact KITZ Corporation for technical advice, or to carry out their own study and evaluation for proving suitability of these products to such an application. Failure to follow this request could result in property damage and/or personal injury, for which we shall not be liable.

While this catalog has been compiled with the utmost care, we assume no responsibility for errors, impropriety or inadequacy. Any information provided in this catalog is subject to from-time-to-time change without notice for error rectification, product discontinuation, design modification, new product introduction or any other cause that KITZ Corporation considers necessary. This edition cancels all previous issues.

Read instruction manual carefully before use.

NOTICE

If any products designated as strategic material in the Foreign Exchange and Foreign Trade Law, Cabinet Order Concerning Control of Export Trade, Cabinet Order Concerning Control of Foreign Exchange and other related laws and ordinances ("Foreign Exchange Laws") are exported to any foreign country or countries, an export license issued by the Japanese Government will be required under the Foreign Exchange Laws.

Further, there may be cases where an export license issued by the government of the United States or other country will be required under the applicable export-related laws and ordinances in such relevant countries.

The contract shall become effective subject to that a relevant export license is obtained from the Japanese Government.
